WNRCD Seeking Small Farms in Need of Nutrient Management Plans

Berlin/ Williston- The Winooski Natural Resource Conservation District, in conjunction with the Vermont Association of Conservation Districts, UVM Extension and USDA-NRCS, are offering a program to help small farms write Nutrient Management Plans (NMP) to meet the new Required Agricultural Practices.

"By writing your own NMP you can: understand the nutrient needs of your soil, learn how to improve water quality and soil health on your farm, learn how to best use your manure on your land and meet a requirement of the state's Required Agricultural Practices." The Winooski Natural Resources Conservation District is here to help you at no cost. This free program for small farms that spread manure, benefits from District staff working one-on-one with the farmer to collect and analyze soil and manure and create an individualized plan through in class instruction. Participants will receive a land treatment plan that identifies what management practices can be implemented that will protect not only water quality and soil health, but the economic viability of the farm.

Farmers in Chittenden and Washington County interested in participating in the NMP class or learning more about Agricultural Best Management Practices that can be implemented please visit: www.winooskinrcd.org or email: info@winooskinrcd.org. The deadline to register for this years' class is July 31, 2017. Our updated website contains valuable resources and available assistance for farmers. In addition links to handouts, presentations and upcoming workshops on the new Required Agricultural Practices.

The Winooski Natural Resources Conservation District is one of 14 conservation districts throughout Vermont. It encompasses all of Chittenden and Washington County as well as parts of Orange County (Orange, Williamstown and Washington). The district relies on grants and individual donations to complete its conservation work. The WNRCD focuses its resources on completing conservation projects within the areas of agricultural assistance, forestland enhancement, urban conservation and watershed stewardship.
